Press Release

CommandSoft Launches FibreJet SAN Shared Digital Storage Solution for Final Cut Pro®, Avid®, Media 100®, ProTools®, Adobe® and others

Santa Barbara, January 10, 2003: CommandSoft, Inc. announced today the release of its flagship product line, FibreJet, a Storage Area Management (SAM) solution for Storage Area Networks (SANs) initially targeted at the Digital Video, Audio and Graphics markets. FibreJet is a next-generation shared-storage solution, allowing file systems to be dynamically shared in a multiple-reader / single writer environment. FibreJet also includes project based security and 2 Gb/s Fibre Channel support. The initial release, shipping in February, retails for \$2,695 (US) and supports Macintosh OS X, with follow on releases to include support for Mac OS 8-9 and Windows 2000. The FibreJet solution also includes next generation Fibre Channel driver software. Customers of Hewlett Packard's discontinued Transoft FibreNet product are eligible for a Net-to-Jet upgrade promotion giving them a \$400 (US) rebate when they return their Transoft dongle to CommandSoft. The product is available through resellers as well as direct by contacting CommandSoft sales at 800-447-0114 or ordering online at <http://www.commandsoft.com>

Other offerings –

CommandSoft is committed to building long-term relationships and providing customers continuing, ongoing support. FibreJet is first in a long line of next generation system, storage, cluster, and active-control management "DataBrain" products and services planned. In addition to the release of FibreJet and the Net-to-Jet upgrade promotion, CommandSoft is also developing next generation 2 Gb/s Fibre Channel drivers and is offering the PCI cards as well. Customers can also choose from a variety of support options, including service contracts offering 8/5, 24/7 and per incident options. CommandSoft's training courses offer on-site and off-site options for training technical staff in the proper use of FibreJet and SANs.

About CommandSoft –

A team of the original developers of FibreNet, StudioBOSS, FC Net Director RAID, SAN Manager and many other great storage software products, founded CommandSoft, Inc. This team was also among the first to bring Fibre Channel to the world with their HBA drivers for Windows, Solaris, Mac OS, IRIX including Qlogic, Emulex, and Tachyon chipsets.

FibreJet™ is a trademark of CommandSoft, Inc.
Transoft, FibreNet, StudioBOSS, FC Net Director, SCSI Director and SAN Manager are trademarks of Transoft Networks, a Hewlett Packard Company
All other trademarks are trademarks of their respective companies.

For Release 6 a.m. GMT, 1/10/2003
